

# betaMC: Monte Carlo for Regression Effect Sizes

Ivan Jacob Agaloos Pesigan

## Description

Generates Monte Carlo confidence intervals for standardized regression coefficients (beta) and other effect sizes, including multiple correlation, semipartial correlations, improvement in R-squared, squared partial correlations, and differences in standardized regression coefficients, for models fitted by `lm()`. **betaMC** combines ideas from Monte Carlo confidence intervals for the indirect effect (Pesigan & Cheung, 2023) and the sampling covariance matrix of regression coefficients (Dudgeon, 2017) to generate confidence intervals effect sizes in regression.

## Installation

You can install the CRAN release of **betaMC** with:

```
install.packages("betaMC")
```

You can install the development version of **betaMC** from [GitHub](#) with:

```
if (!require("remotes")) install.packages("remotes")
remotes::install_github("jeksterslab/betaMC")
```

## More Information

See [GitHub Pages](#) for package documentation.
