Package 'betaMC'

February 8, 2023

| 1 Columny 6, 2025 | | | |
|--|--|--|--|
| Title Monte Carlo Confidence Intervals for Standardized Regression Coefficients | | | |
| Version 1.0.0.9000 | | | |
| Description Generates Monte Carlo confidence intervals for standardized regression coefficients for models fitted by lm(). 'betaMC' combines ideas from Monte Carlo confidence intervals for the indirect effect (Preacher and Selig, 2012 <doi:10.1080 19312458.2012.679848="">) and the sampling covariance matrix of regression coefficients (Dudgeon, 2017 <doi:10.1007 s11336-017-9563-z="">) to generate confidence intervals for standardized regression coefficients.</doi:10.1007></doi:10.1080> | | | |

| Betal | Estimate Standardized Regression Coefficients and Generate Sam- | |

Description

Estimate Standardized Regression Coefficients and Generate Sampling Distributions Using the Monte Carlo Method

pling Distributions Using the Monte Carlo Method

Usage

```
BetaMC(
  object,
  R = 20000L,
  type = "hc3",
  g1 = 1,
  g2 = 1.5,
  k = 0.7,
  decomposition = "eigen",
  pd = TRUE,
  tol = 1e-06
)
```

Arguments

object Object of class 1m.

R Positive integer. Number of Monte Carlo replications.

type Character string. Sampling covariance matrix type. Possible values are "mvn", "adf", "hc0", "hc1", "hc2", "hc3", "hc4", "hc4m", and "hc5". type = "mvn" uses the normal-theory sampling covariance matrix. type = "adf" uses the asymptotic distribution-free sampling covariance matrix. type = "hc0" through "hc5" uses different versions of heteroskedasticity-consistent sampling covariance matrix.

BetaMC 3

g1 Numeric. g1 value for type = "hc4m" or type = "hc5".

g2 Numeric. g2 value for type = "hc4m".
k Numeric. Constant for type = "hc5"

decomposition Character string. Matrix decomposition of the sampling variance-covariance

matrix for the data generation. If decomposition = "chol", use Cholesky decomposition. If decomposition = "eigen", use eigenvalue decomposition. If

decomposition = "svd", use singular value decomposition.

pd Logical. If pd = TRUE, check if the sampling variance-covariance matrix is posi-

tive definite using tol.

tol Numeric. Tolerance used for pd.

Details

The empirical sampling distribution of parameter estimates for the unstandardized regression model is generated using the Monte Carlo method, that is, random values of parameter estimates are sampled from the multivariate normal distribution using the estimated parameter vector as the mean vector and the specified sampling covariance matrix using the type argument as the covariance matrix. The standardized regression coefficients are derived from each randomly generated vector of parameters to generate the empirical sampling distribution of estimates of standardized slopes. Confidence intervals are generated by obtaining percentiles corresponding to $100(1-\alpha)\%$ from the generated sampling distribution of standardized slopes, where α is the significance level.

Value

Returns an object of class betamc which is a list with the following elements:

call Function call.

lm Object of class 1m.

lm_process Pre-processed object of class 1m.

type Standard error type.

thetahatstar Sampling distribution of standardized estimates.

vcov Sampling distribution of standardized estimates.

est Vector of standardized slopes.

4 coef.betamc

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
out <- BetaMC(object, R = 100)
# use a large R, for example, R = 20000 for actual research
# Methods -------
print(out)
summary(out)
coef(out)
vcov(out)
confint(out, level = 0.95)</pre>
```

coef.betamc

Standardized Regression Slopes

Description

Standardized Regression Slopes

Usage

```
## S3 method for class 'betamc'
coef(object, ...)
```

Arguments

```
object Object of class betamc.
... additional arguments.
```

Value

Returns a vector of standardized regression slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982)
```

coef.difbetamc 5

coef.difbetamc

Differences of Standardized Regression Slopes

Description

Differences of Standardized Regression Slopes

Usage

```
## S3 method for class 'difbetamc'
coef(object, ...)
```

Arguments

```
object Object of class difbetamc.
... additional arguments.
```

Value

Returns a vector of differences of standardized regression slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaMC(object)
out <- dif(std)
coef(out)</pre>
```

confint.betamc

Confidence Intervals for Standardized Regression Slopes

Description

Confidence Intervals for Standardized Regression Slopes

Usage

```
## S3 method for class 'betamc'
confint(object, parm = NULL, level = 0.95, ...)
```

6 confint.difbetamc

Arguments

object Object of class betamc.

parm a specification of which parameters are to be given confidence intervals, either

a vector of numbers or a vector of names. If missing, all parameters are consid-

ered.

level the confidence level required.

... additional arguments.

Value

Returns a matrix of confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- BetaMC(object, R = 100) # use a large R, for example, R = 20000 for actual research confint(out, level = 0.95)
```

confint.difbetamc

Confidence Intervals for Differences of Standardized Regression Slopes

Description

Confidence Intervals for Differences of Standardized Regression Slopes

Usage

```
## S3 method for class 'difbetamc'
confint(object, parm = NULL, level = 0.95, ...)
```

Arguments

object Object of class difbetamc.

parm a specification of which parameters are to be given confidence intervals, either

a vector of numbers or a vector of names. If missing, all parameters are consid-

ered.

level the confidence level required.

... additional arguments.

dif 7

Value

Returns a matrix of confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaMC(object)
out <- dif(std)
confint(out, level = 0.95)</pre>
```

dif

Differences of Regression Slopes

Description

Differences of Regression Slopes

Usage

```
dif(object, ...)
## S3 method for class 'betamc'
dif(object, ...)
```

Arguments

object Object used to select a method.
... additional arguments.

Author(s)

Ivan Jacob Agaloos Pesigan

8 print.betamc

nas1982

1982 National Academy of Sciences Doctoral Programs Data

Description

1982 National Academy of Sciences Doctoral Programs Data

Usage

nas1982

Format

Ratings of 46 doctoral programs in psychology in the USA with the following variables:

QUALITY Program quality ratings.

NFACUL Number of faculty members in the program.

NGRADS Number of program graduates.

PCTSUPP Percentage of program graduates who received support.

PCTGRT Percent of faculty members holding research grants.

NARTIC Number of published articles attributed to program faculty member.

PCTPUB Percent of faculty with one or more published article.

print.betamc

Print Method for an Object of Class betamc

Description

Print Method for an Object of Class betamc

Usage

```
## S3 method for class 'betamc'
print(x, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

print.difbetamc 9

Arguments

| X | Object of Class betamc. |
|--------|-------------------------|
| alpha | Significance level. |
| digits | Digits to print. |
| | additional arguments. |

Value

Returns a matrix of standardized regression slopes, standard errors, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982)
```

print.difbetamc

Print Method for an Object of Class difbetamc

Description

Print Method for an Object of Class difbetamc

Usage

```
## S3 method for class 'difbetamc' print(x, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

| X | Object of class difbetamc. |
|--------|----------------------------|
| alpha | Significance level. |
| digits | Digits to print. |
| | additional arguments. |

Value

Returns a matrix of standardized regression slopes, standard errors, test statistics, p-values, and confidence intervals.

10 summary.betamc

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaMC(object)
out <- dif(std)
print(out)</pre>
```

summary.betamc

Summary Method for an Object of Class betamc

Description

Summary Method for an Object of Class betamc

Usage

```
## S3 method for class 'betamc'
summary(object, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

```
object Object of class betamc.

alpha Significance level.

digits Digits to print.

... additional arguments.
```

Value

Returns a matrix of standardized regression slopes, standard errors, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982)
```

summary.difbetamc 11

summary.difbetamc

Summary Method for an Object of Class difbetamc

Description

Summary Method for an Object of Class difbetamc

Usage

```
## S3 method for class 'difbetamc' summary(object, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

object Object of class difbetamc. alpha Significance level.

digits Digits to print.

... additional arguments.

Value

Returns a matrix of standardized regression slopes, standard errors, test statistics, p-values, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaMC(object)
out <- dif(std)
summary(out)</pre>
```

vcov.betamc

Sampling Covariance Matrix of the Standardized Regression Slopes

Description

Sampling Covariance Matrix of the Standardized Regression Slopes

Usage

```
## S3 method for class 'betamc'
vcov(object, ...)
```

12 vcov.difbetamc

Arguments

```
object Object of class betamc.
... additional arguments.
```

Value

Returns a matrix of the variance-covariance matrix of standardized slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY \sim NARTIC + PCTGRT + PCTSUPP, data = nas1982) out <- BetaMC(object, R = 100) # use a large R, for example, R = 20000 for actual research vcov(out)
```

vcov.difbetamc

Sampling Covariance Matrix of Differences of Standardized Regression Slopes

Description

Sampling Covariance Matrix of Differences of Standardized Regression Slopes

Usage

```
## S3 method for class 'difbetamc'
vcov(object, ...)
```

Arguments

object Object of class difbetamc.
... additional arguments.

Value

Returns a matrix of the variance-covariance matrix of differences of standardized regression slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

vcov.difbetamc 13

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaMC(object)
out <- dif(std)
